

RECOMPOSITION DIET PLAN

Build Muscle · Lose Fat · Fuel Your Runs

18 y/o · 182 cm · 79.7 kg · 17.2% BF · BMR 1,796 kcal

Running: 4-5x/week · Gym: 3x/week

2,400 kcal · 160g Protein · 240g Carbs · 70g Fat

v3 · May 2026

2,400 kcal

Daily Calories

-300 deficit

160 g

Protein

2g / kg BW

240 g

Carbs

Fuel runs + gym

70 g

Fat

Hormones + health

CALORIE RULE: Base = 2,400 kcal. Long run day (Saturday) = add the run day extras on TOP. Rest day (Sunday) = 2,100 kcal. Protein is 160g EVERY day without exception.

NUTRITION STRATEGY

Why 160g Protein?

2g/kg bodyweight — the evidence-based ceiling for muscle protein synthesis. Sources: chicken, eggs, Greek yogurt, tuna, cottage cheese, beef, salmon, protein bars.

Why 240g Carbs?

You run 4-5x/week. Carbs are your fuel. Cutting them = bad runs, bad gym sessions, muscle loss. Don't go low-carb. Time carbs around training.

Why 70g Fat?

Essential for testosterone and hormones at 18. You get this from eggs, olive oil, nuts, salmon, full-fat dairy. Controlled here so you stay in a calorie deficit.

Recomp Calorie Math

TDEE estimate: $BMR\ 1,796 + running\ \sim 600 + gym\ \sim 300 + daily\ activity\ \sim 400 = \sim 3,100$. $2,400\ kcal = \sim 700\ deficit$. Recomp works at your age — you'll build muscle AND lose fat. Expect 0.3-0.5 kg/week net weight loss.

Meal Timing

Pre-workout: carbs + protein 1hr before. Post-workout: protein + carbs within 2hrs. Pre-long run: extra carbs the night before. Pre-sleep: slow protein (Greek yogurt, cottage cheese, eggs).

Hydration

3-4L/day minimum. Powerade during and after runs is approved — it covers electrolytes and carbs simultaneously. Plain water for rest of the day.

GYM DAY MEAL PLAN

Mon / Wed / Sat — ~2,400 kcal · P 160g · C 240g · F 70g

MEAL 1 — BREAKFAST

FOOD	AMOUNT	PROTEIN	CARBS	FAT	KCAL
Whole eggs (any style)	4 eggs	24g	0g	20g	280
Greek yogurt (full fat)	150g	12g	7g	5g	120
Oats or granola	50g	5g	35g	4g	195
Banana	1 medium	1g	27g	0g	105
TOTAL		42g	69g	29g	700

TIP: High protein right from the start. Swap oats for granola with honey if you want. Takes 5 minutes.

MEAL 2 — PRE-WORKOUT

1hr before gym

FOOD	AMOUNT	PROTEIN	CARBS	FAT	KCAL
Brown toast or rice cakes	2 slices / 3 cakes	3g	35g	1g	155
Peanut butter	1 tbsp	4g	3g	8g	94
Whey protein shake OR protein bar	1 serving	20-25g	5-20g	2-5g	120-200
TOTAL		~28g	~43g	~11g	~370

TIP: Protein bar here is perfect — grab it 60 minutes before lifting. No cooking, no prep, hits both protein and carbs.

MEAL 3 — POST-WORKOUT LUNCH

Within 2hrs post-gym

FOOD	AMOUNT	PROTEIN	CARBS	FAT	KCAL
Chicken breast (grilled)	200g	44g	0g	4g	210
White rice (cooked)	200g	4g	50g	1g	220
Mixed vegetables or salad	1 cup	3g	12g	2g	70
Olive oil	1 tbsp	0g	0g	14g	120
TOTAL		51g	62g	21g	620

TIP: Your most important meal. Cook the chicken in bulk on Sunday — takes 30 min and covers 4 days of lunches.

MEAL 4 — AFTERNOON SNACK

5:00 PM

FOOD	AMOUNT	PROTEIN	CARBS	FAT	KCAL
Greek yogurt or cottage cheese	200g	20g	8g	5g	155
Nuts (almonds, cashews)	25g	5g	5g	14g	165
Fruit (apple, orange, banana)	1 piece	0g	20g	0g	80
TOTAL		25g	33g	19g	400

TIP: Easy, no cooking. Greek yogurt + nuts + fruit = protein, healthy fat, and carbs in under 2 minutes.

MEAL 5 — DINNER

8:00 – 9:00 PM (EASY — 10 min max)

FOOD	AMOUNT	PROTEIN	CARBS	FAT	KCAL
Canned tuna OR eggs (3-4 boiled)	1 can / 4 eggs	30-36g	0g	4-20g	150-280
OR: Rotisserie chicken (leftover)	150g	33g	0g	7g	200
Toast or pitta (2 slices)	2 slices	5g	30g	1g	145
Sliced tomato + cucumber	—	1g	5g	0g	25
TOTAL		~39g	~35g	~12g	~420

TIP: DEAD SIMPLE. Open a can of tuna, boil eggs, or pull leftover chicken from the fridge. Toast it, done. No cooking needed. This is intentionally the lightest meal of the day.

GYM DAY TOTAL: ~2,510 kcal · Protein: ~185g · Carbs: ~242g · Fat: ~92g

Slightly above targets — fine. Reduce rice portion or skip nuts to trim calories if needed.

RUN DAY ADDITIONS

These are ADDED ON TOP of the main meal plan above — not a replacement.

■ Everything in the main plan stays exactly the same on run days. You only ADD the items below at the specific timings around your run.

TIMING	WHAT TO ADD	AMOUNT	APPROX MACROS	NOTES
Night before long run (Friday dinner)	Extra rice or pasta	+ 100g cooked	+4g P / +25g C / 110 kcal	Top up glycogen stores pre-Saturday long run
1hr before run	Banana + honey on toast	1 banana + 1 tsp honey	40g C / 165 kcal	Fast carbs — easy to digest, no GI issues
During run >60min	Powerade (500ml)	500ml per hour	0g P / 30g C / 130 kcal	Electrolytes + carbs in one. Approved. Use it.
During run >60min (alternative)	Dates (tamr)	2-3 pieces / 45min	10g P / 20g C / 80 kcal	If you don't have Powerade. Dates = natural glucose
Within 30min post-run	Protein shake OR protein bar	1 serving	20-25g P / 10-30g C	Get protein in ASAP after any hard run or long run
Long run day dinner	Add extra starch	+ 100g rice or sweet potato	25g C / 110 kcal	Refuel for the week ahead — don't skip this on Saturdays

Powerade is fully approved as your run electrolyte drink. It gives you sodium, potassium, and fast carbs in one. Use during any run over 60 minutes or in extreme heat. No need for anything fancier.

REST DAY (SUNDAY) — ~2,100 kcal

MEAL	WHAT TO EAT	APPROX KCAL
Breakfast	4 eggs + Greek yogurt + fruit	~500 kcal
Lunch	Grilled meat or fish + salad + small rice	~500 kcal
Snack	Cottage cheese or yogurt + nuts	~300 kcal
Dinner	Tuna / boiled eggs + toast + tomatoes	~350 kcal
SKIP	One snack vs gym day (lower activity today)	~-200 kcal
TOTAL	~2,100 kcal · Keep protein at 160g	~2,100 kcal

BEST PROTEIN SOURCES — RANKED

#	FOOD	PROTEIN	NOTES
1	Chicken breast (grilled)	31g/100g	Daily staple. Cook in bulk Sunday.
2	Eggs (whole)	13g/egg	Perfect amino profile. Eat the yolk.
3	Canned tuna in water	26g/100g	Zero prep. Always keep stocked.
4	Greek yogurt (full fat)	8-10g/100g	Casein = slow-release. Great pre-sleep.
5	Cottage cheese	11g/100g	Underrated. Very filling. High casein.
6	Salmon / fatty fish	20-22g/100g	Omega-3 bonus for run recovery.
7	Beef (lean cuts)	26-30g/100g	Natural creatine + zinc + iron.
8	Protein bar	20-25g/bar	Pre-workout or travel snack. Approved.
9	Whey protein shake	25g/scoop	Post-run / post-gym convenience.
10	Lentils / chickpeas	8-9g/100g	Plant protein + fiber + carbs combo.

FOODS TO LIMIT

FOOD	ISSUE	SWAP
Sugary drinks (Pepsi, juice)	Empty calories, no nutrition	Water, sparkling water, black coffee
Ultra-processed snacks (chips)	High cal, low protein, easy to overeat	Nuts, yogurt, boiled eggs, protein bar
Fried everything	Doubles calories, trans fats	Grilled, baked, air-fried
Alcohol	Kills testosterone + recovery	—
Powerade on rest days	Not needed when not sweating	Plain water is fine off-run days

Protein bars: approved as a convenience food for pre-workout or travel. Check the label — aim for 20g+ protein, under 300 kcal, and no more than 20g sugar.

SUPPLEMENTS — YOUR CURRENT STACK

SUPPLEMENT	YOUR DOSE	TIMING	WHAT IT DOES FOR YOU
Omega-3 Fish Oil (YOU HAVE THIS)	2-3g EPA+DHA	With any meal	Reduces muscle soreness and inflammation from running. Critical at 40-50.
Multivitamin (YOU HAVE THIS)	Per label	Morning with food	Covers micronutrient gaps — especially important when in a calorie deficit.

Your stack is solid. Omega-3 is genuinely one of the most impactful supplements for a runner-lifter. Multivitamin covers the gaps. That's it — everything else gets handled by food and training.

THE 10 GOLDEN RULES

#	RULE	WHY IT MATTERS
01	Hit 160g protein every day	The single most important number. Everything else is secondary.
02	Track food for 4 weeks minimum	MacroFactor or MyFitnessPal. After 4 weeks you'll know your meals by heart.
03	Sleep 8+ hours	GH peaks during deep sleep at 18. Poor sleep = losing muscle not fat.
04	Weigh yourself every morning	After bathroom, before food. Take weekly average — ignore daily noise.
05	Progressive overload every gym session	Did you lift last week's numbers? That was maintenance, not growth.

06	Drink 3-4L water daily	More on hot days, run days, sauna days. Powerade during runs counts.
07	Eat protein first at every meal	Controls hunger, improves absorption, naturally limits overeating.
08	Meal prep Sunday	Grill 1kg chicken, cook rice, boil 10 eggs. 45 minutes = whole week sorted.
09	InBody scan every 5-6 weeks	Not weekly — hydration fluctuates. Track the trend over months.
10	Give it 12 weeks	Recomp is slow by nature. The August 2026 InBody will tell the real story.

**18. HIGH BMR. 4-5 RUNS A WEEK. EVERY HORMONAL ADVANTAGE.
EAT RIGHT. LIFT HARD. RUN SMART. SLEEP WELL. REPEAT.**
